Foreword

Ladies and Gentlemen, dear readers,

In Austria a broad range of actors is involved in official development assistance (ODA). This calls for the best possible coordination and consultation. Our joint activities are guided by a mission statement, which we drew up in 2012 with our economic, scientific and social partners along with public-benefit organisations, countries, ministries and parliament. In a year-long discussion process, their expertise in preparing the Three-Year Programme on Austrian Develop-

we also drew on their expertise in preparing the Three-Year Programme on Austrian Development Policy until 2015.

The Three-Year Programme is designed to guide our whole-of-government actions. A major principle for Austria is to align itself with the priorities and needs of its partner countries. It will be taking particular account of new global conditions, such as climate change or increased mobility. A number of international publications, such as the Human Development Report by the United Nations Development Programme indicate that future development policymaking can only succeed in global partnership. This is why it was necessary to chart a suitable new course. Without changing the geographical portfolio for the moment, we shall concentrate on the three themes where our special strengths lie, and which are also of key importance for poverty reduction:

- Water supply, energy and climate protection, agriculture and forestry
- Private sector and development
- Human security, human rights and rule of law

Added to this are the multi-sectoral themes of gender equity, education and capacity development as well as environmental protection and climate change.

Citing examples of successful projects, the present report illustrates the diversity of the engagement of different ODA actors. Against the backdrop of the UN's International Year of Sustainable Energy for All in 2012, we have focused on projects and programmes in sustainable energy supply. Access to clean and affordable energy sources raise the quality of life, but it is also vital for sustainable development. As in previous years, the report also provides a detailed picture of the sources, composition, amount and application of Austrian ODA.

I hope you will find interesting and inspiring reading.

Reinhold Lopatka State Secretary in the Federal Ministry for European and International Affairs

Development policy 2012

More coherence with a new vision

When drafting its Three-Year Programme on Development Policy for 2013 to 2015, which was adopted by the Council of Ministers on 18 December 2012, Austria charted a completely new course: The starting point was a broad consultative process involving all actors of official development assistance – ministries, parliament, social partners, non-governmental organisations (NGOs), business and industry and scientists. The outcome is a multi-year programme that sets out the strategic framework until 2015.

Austria will continue to concentrate on areas where it can draw on special expertise. These include water, energy and climate protection, agriculture and forestry, private sector and development, human security, human rights and legal certainty. This thematic focus will sharpen Austria's profile as a donor and enable it to harness its comparative advantages.

The mission statement of Austrian development policy prefacing the Three-Year Programme, which sets out basic policy documents and principles, is the guide for all development-policy actors. It was prepared in the course of a jour fixe for development-policy under the leader-ship of the State Secretary. Austria is committed to cooperation based on partnership, which respects and strengthens partner country ownership. The actors are committed to transparency, management for results and efficiency, policy coherence at national level and in consultation with other donors. The key points of the Accra Agenda for Action and the outcomes of the 4th High Level Forum on Aid Effectiveness in Busan have therefore been assimilated into Austrian development-policy strategy.

Geographically, Austria focuses on its priority countries, paying particular attention to the least-developed African partners. Specific strategies are available for the new partner countries in South Caucasus – Georgia and Armenia – since December 2012. These were prepared together with the governments in Tbilisi and Yerevan and lay the foundation for future Austrian engagement. Key frames of reference included the EU Partnership and Cooperation Agreement, the Action Plan of the European Neighbourhood Policy and the EU National Indicative Programme for Georgia.

Cooperation with civil-society organisations and the private sector remain major concerns as part of consultative processes and via cofinancing NGO programmes and projects and promoting business partnerships.

Together for development

To advance a coherent and inclusive development policy, the Foreign Ministry and the Federal Ministry of National Defence and Sport (FMDS) held a 3C Retreat at the Peace Castle in Schlaining in November 2012. At the conference, representatives of different ministries, research institutes, non-governmental organisations and Austrian Development Cooperation discussed issues of security and development. They framed a common position and laid the foundation for their future work in security sector reform and mediation/ support of peace processes and for the key region of West Africa.

In 2012, work began on revising the Federal Ministry of Finance's (FMF) Strategy for International Financial Institutions (IFIs). In keeping with the interministerial Strategic Guideline on Environment and Development, a clear focus will be placed on climate protection.

Multilateral development cooperation

European Union

As the world's largest donor despite the crisis and budget cuts in many countries in 2012, the EU member states and the European Commission (EC) made altogether about EUR 64 billion in official development assistance (ODA) payments. Austria contributed EUR 214 million to development cooperation under the EU budget and to the European Development Fund (EDF). At 24.87 per cent, the contributions administered via the EU make up one of the largest single items in Austrian ODA.

Agenda for Change

As of 2014, the European Union will pursue a different development-policy course. The related Council conclusions on Increasing the impact of EU Development Policy: an Agenda for Change were adopted in May 2012. The Foreign Ministry contributed its positions in Council working groups and ministerial councils. These were preceded by a broad consultative process in Austria. This succeeded in bringing pro-poor and sustainable growth into focus as the basis for permanent poverty reduction, without detracting from the basic values of EU development policy, human rights, democracy and good governance, for example.

Following up on the Agenda for Change, work begun on framing the regulations for external policy instruments, such as the Development Cooperation Instrument (DCI), the European Development Fund (EDF) or the European Neighbourhood Instrument (ENI). These are legally binding and detail the areas that are eligible for assistance as part of the various EU external instruments. The budget for this is set out in the Multi-Annual Financial Framework 2014-2020.

Through collaboration in EDF, DCI and ENI, with its priority countries and sectors Austria is integrated in EU programmes and initiatives and can coshape these. Of particular note here are the Water and Energy Initiative, the Africa-EU Energy Partnership, the EU-Africa Infrastructure Trust Fund, the ACP Investment Facility and EU cofinancing of non-governmental organisations.

Global Development Agenda

One of the main outcomes of the United Nations Conference on Sustainable Development (Rio+20) in June 2012 was the call to draft sustainable development goals (SDGs). In terms of content, these stand in close relation with the list of goals to follow the Millennium Development Goals (MDGs) expiring in 2015. Most EU member states, including Austria, called for the amalgamation of processes in a joint framework for the time after 2015.

Austria also collaborated actively in the preparation of Council resolutions, on resilience in the Horn of Africa, for example. The aim here is to enhance the resilience of the population to recurrent drought and famine disasters. Natural disasters cannot be prevented, but the devastating impacts can be substantially mitigated by alleviating the basic causes and taking preventive measures. Based on experience in the region, Austrian Development Cooperation has long emphasised the need to promote the agricultural use of arid regions adapted to natural conditions, instead of continually restricting the land available to the nomadic population. Account was taken of this and other Austrian concerns and they now form part of the EU strategy for the region.

Other Council conclusions were also adopted in 2012, including the 2011 report on progress made in policy coherence as well as conclusions on budget support, democracy and civil society in EU external relations and on social protection in EU development policy.

Red-white-red expertise

Austria intervened in 2012 above all in strategically important issues of EU development policy. It was also engaged in areas where it can draw on long-standing experience and specific know-how. The Austrian comments to the EU Court of Auditors report on European engagement in the water sector in Sub-Saharan Africa were adopted as recommendations for implementing future projects – an example of how Austria helps to frame EU development policy with its technical expertise.

United Nations

The United Nations also gave close consideration in 2012 to the post-2015 development agenda. In June, an international expert commission submitted a report with initial ideas for a follow-up instrument to the UN Millennium Development Goals. In July, the UN Secretary General tasked another high-level body to elaborate these initial proposals by the end of May 2013. An international UN working group is now preparing specific drafts for sustainable development goals.

Primarily via the European Union, Austria actively intervened in the post-2015 debate and advanced its positions, including: amalgamating processes to prepare a MDG follow-up instrument and sustainable development goals; making goals universal but also flexible enough to adjust to national conditions; poverty reduction in all its aspects and sustainable development as the foremost goal of the new framework; prime responsibility of the partner countries for their own development and the close involvement of civil society.

Austria's contributions

Austria supports multilateral organisations through direct contributions and specific programmes and by implementing joint projects.

In 2012, Austria promoted the UN Development Programme (UNDP) 2012 with a core contribution of EUR 1.8 million and also financed a project for strengthening democratisation in Egypt.

In addition to a compulsory contribution in 2012, Austria paid a total of EUR 1.1 million into the Fund for Industrial Development (UNIDO). This was used to finance projects/programmes for promoting private-sector development, improving access to renewable energies, stemming youth unemployment and expanding vocational training.

In November, UNIDO and UNDP jointly organised the Global South-South Development Expo on the issue of energy in the Imperial Palace in Vienna, which offered countries of the South a platform for exchange on successful development-policy schemes and avenues for cooperation. Austria favours efforts to step up South-South cooperation, but instead of a substitute for cooperation between the countries of the North and South, sees it as a major supplement. It particularly welcomes development-policy activities of emerging nations, such as Brazil, China, India or South Africa, and closer cooperation between these countries and traditional donors.

In 2012, Austria was a member of the Executive Committee of the Children's Fund of the United Nations (UNICEF). Topics of discussion included how to prevent the transmission of HIV/AIDS from mothers to their children. Austria attaches priority to children's rights and mother and child health. For this, it financed UNICEF projects in Kosovo and Ukraine.

The UN Capital Development Fund (UNCDF) aims at reducing poverty in the 48 leastdeveloped countries. With a core contribution of EUR 1 million, Austria is one of the largest bilateral donors to this fund. From this, EUR 300,000 was allocated for microfinance projects in renewable energy use in our priority country Uganda.

International Financial Institutions

Austria as a shareholder of IFIs

As a shareholder of the International Financial Institutions and via participating interests in special funds and thematic trust funds, Austria can coshape their policy. The contents of the policy line are specified in the IFI strategy of the Federal Ministry of Finance. Priorities are water, energy efficiency and renewable energy as well as trade and financial-sector and private-sector development.

IFI policy in 2012 was marked above all by the weak global economy. Austria primarily advocated raising funds for the Europe and Central Asia (ECA) Region, because as a direct neighbour this has been particularly affected by the weak economy in the Eurozone.

Austria also supports the IFI decentralisation policy, in particular that of the World Bank Group. The decision of the World Bank to relocate its country office for the Western Balkans from Washington to Vienna marks a major milestone in Austria's long-standing efforts and for the capital as a venue. In connection with this, the World Bank office in Vienna will also be extended to expand the presence of the International Finance Corporation (IFC).

The IFI Contribution Act 2012 confirmed Austrian commitments to the International Fund for Agricultural Development (IFAD 9) and the Asian Development Fund (AsDF XI).

Trust funds

Via trust funds, FMF supports special programmes of the International Financial Institutions that conform with the priorities of the Austrian IFI strategy. FMF advances Austria's positions in regular talks with the programme implementers and at meetings of trust fund donors, such as the World Bank Group's Investment Climate Advisory Service (FIAS).

In 2012, Austria joined the World Bank's Global Facility for Disaster Reduction and Recovery (GFDRR), which supports major measures for the adaptation of least-developed countries to the impacts of climate change. Austria has also made a contribution to the Sustainable Energy and Climate Change Initiative (SECCI) of the Inter-American Development Bank (IDB).

IN FOCUS: Sustainable energy for all

While energy demand keeps rising in emerging and developing countries above all, 1.2 billion people still live with no access at all to electricity worldwide. Twice as many have no modern cooking facilities, and thus face risks to their health. This is why the United Nations declared 2012 as the International Year of Sustainable Energy for All. The many activities seek to raise awareness that access to modern, clean and affordable energy forms is essential for reducing global poverty.

With his initiative, Sustainable Energy for All (SE4All) as early as 2011, UN Secretary General Ban Ki-moon called on the international community to do everything possible to achieve three goals by 2030: access for all to modern energy forms, substantially higher efficiency and doubling the share of renewable energies in the energy mix. In 2012, it was decided to open a UN office for the initiative in Vienna as of July 2013.

Developing countries can draw on inexhaustible sources of renewable energy. These include, for example, (small) hydropower, solar thermal energy or biogas. The necessary capacities, technologies and finance are, however, often lacking for their environment-friendly and efficient use. The United Nations therefore works closely with the World Bank and bilateral development agencies to reduce policy, financial and technological barriers and build up the related know-how. Austria is also involved in this sector and spent more than 11 million Euros on projects and programmes for sustainable energy supply and increased energy efficiency in 2012.

Austrian Development Cooperation

Bilateral regional programmes

In sustainable energies, Austrian Development Cooperation primarily promotes regional programmes in Sub-Saharan Africa:

At the request of the Economic Community of West African States (ECOWAS), together with UNIDO and other donors Austria has since 2009, for example, supported the ECOWAS Centre for Renewable Energy and Energy Efficiency in West Africa (ECREEE) based in Praia, Cape Verde. Via cooperation with the energy ministries, this exerts an influence in all 15 member countries of ECOWAS.

Since the establishment of the centre, many projects have been implemented for policy and capacity development, technology transfer, investment promotion and raising awareness. At the GFSE Energy Forum – Paving the Way for Sustainable Energy for All in West Africa through Renewable Energy and Energy Efficiency in Ghana in October 2012, all 15 West African energy ministers adopted regional policies and action programmes for renewable energy use and the improvement of energy efficiency as well as a five-year programme for small hydropower.

The East African Community (EAC) and the Southern African Development Community (SADC) are now following suit and have requested UNIDO to set up similar energy centres in their regions. Austria, the various EU institutions, such as the Partnership Dialogue Facility of the EU Energy Initiative and UNIDO, are now preparing this together.

The Energy and Environment Partnership among Austria, Finland and United Kingdom in Southern and East Africa has been expanded to include altogether 13 countries and preparations have been made for replenishing funds to finance larger feasibility studies and pilot projects with dissemination potential.

Project: SOLTRAIN - Disseminating solar thermal energy

Southern Africa numbers among the regions with the highest solar irradiation worldwide. Energy demand is, however, often met from electric power from thermal power stations and/or diesel generators. Heating water for households, hospitals or for the food industry with electricity exacerbates the shortage, frequently causing power failures. This also incurs economic losses. The initiative, Southern African Solar Thermal Training and Demonstration (SOLTRAIN), helps to alleviate this with a capacity development programme.

Results

- Training of 400 actors in Mozambique, South Africa, Zimbabwe and Namibia in 9 training-of-trainers workshops
- 9 workshops for about 215 policymakers
- Based on analyses and through local monitoring or via the Internet, the four local partner institutes can now prepare and apply proposals for improving solar thermal energy systems.
- In four countries, new hot water systems have been installed in 60 social institutions, such as schools, infirmaries or orphanages, reducing operating costs.
- A testing system assures the quality of locally produced and imported solar thermal energy systems.

Partners:

AEE – Institute for Sustainable Technologies, Gleisdorf Sustainable Energy Society of Southern Africa Centre for Renewable and Sustainable Energy Studies Renewable Energy & Energy Efficiency Institute Eduardo Mondlane University

Federal Ministry of Finance

The Austrian Ministry of Finance supports the World Bank's Energy Sector Management Assistance Programme (ESMAP). The Austrian Development Agency (ADA), the operational unit of Austrian Development Cooperation, is the leading institution responsible for content. In 2012, ESMAP provided valuable analytical support to the UN initiative, Sustainable Development for All – primarily with assessments and gap analyses of access to energy services in selected countries. Under the initiative, the World Bank is committed to a number of measures, including expanding the programme, Lighting Africa (see below). Low carbon growth country studies have also been completed as part of the programme. These provide seven of the world's largest emerging countries a basis for drafting strategies to reduce greenhouse gas emissions. Finally, using the Tool for Rapid Assessment of City Energy (TRACE) surveys were conducted in twelve cities on potential savings in the energy sector and how to improve energy efficiency.

Partners: World Bank, International Finance Corporation, other donors

Project: Lighting Africa

With support from the Austrian Finance Ministry and other donors, the World Bank and its sister institution, the International Finance Corporation started a programme in 2007 to make sustainable, fundamental improvements to the lives of the poorest populations in Africa. The aim of Lighting Africa is to improve access to affordable lighting from renewable energy on our neighbouring continent. With success, as the results so far show.

Results

- Clean lighting and improved access to solar lighting for 6.9 million people in Sub-Saharan Africa
- Sale of 1.3 million off-grid, certified lighting systems that conform with Lighting Global quality standards in Africa
- Almost 140,000 fewer tonnes in greenhouse gas emissions

Federal State of Styria

Styria supports several photovoltaic and solar projects in Africa. In Tanzania, for example, the photovoltaic systems in the Kwalukonge health centre in the northeast of the country and in three health stations in the remote villages of Itaragwe, Maskati and Vidunda run medicinal refrigerators and basic medical equipment. In Uganda, a solar collection system provides a source of heat for a chicken farming project. This has improved the food situation in Gulu.

Project: Solar system for school in Tanzania

With support from Styria, a school in Biharamulo in northeastern Tanzania is supplied with renewable energy. Technicians were first trained to construct solar and photovoltaic systems and now help in practical installation from assembly to cabling. They have also been instructed in professional maintenance to ensure permanent power supply to the school centre. The system is designed so that it can be easily enlarged and other infrastructure and educational facilities can be supplied with electricity.

Partners: Styria: the Life Earth association and MOJO Fullscale Studio NPO Tanzania: Rulenge-Ngara diocese and the school centre in Biharamulo

Results

- The self-sufficient energy supply of the education centre by means of photovoltaics substantially reduces the cost of electricity.
- Thanks to stable power supply, 340 pupils can be trained in information technology.
- The school computers are also available to the local population for Internet research.

Report 2012

16

Other news from national and federal state governments

Federal Ministry for Education, Arts and Culture

The Federal Ministry for Education, Arts and Culture (FMEAC) supports countries in Eastern and South-Eastern Europe in reforming their educational systems. It also promotes the exchange of experience among educational institutions and experts in the region. Numerous initiatives are carried out together with KulturKontakt Austria. The main working priorities in 2012 were quality development, introducing new teaching and learning strategies, developing practical vocational training, supporting cooperation between school and community, promoting education for sustainable development, setting up and supporting education networks and exploring new approaches to dealing with diversity and difference.

Every year, more than ten project offices headed by Austrian officers for educational cooperation hold about 100 events. These are concerned with developing training schemes, training-of-trainers, developing curricula and teaching materials, in-service teacher training, the introduction of new approaches to promoting cooperation between schools and the private sector and further training in quality development and educational management.

Project: Education for sustainable development in Albania

In autumn 2012, environment and sustainable development was introduced as a teaching subject at all vocational schools in Albania. To assure quality and sustainability, Kultur Kontakt Austria provides further training in cooperation with the Albanian Education Ministry and the National Agency for Vocational Education and Training for all teachers of this subject. In addition, it helps in developing an Albanian school network for sustainable development as a platform for exchange of experience and supports lobbying for this issue.

Results

- 41 teachers at 41 Albanian vocational schools received further training in environment and sustainable development.
- Representatives of ten schools have joined together into a network for sustainable development and developed a plan of action for 2013.

Federal Ministry of the Interior

The Federal Ministry of the Interior (FMI) supports voluntary returnees in their journey home and their sustainable reintegration in their native country. They are helped in gaining a foothold on the local labour market and earning income for themselves and their families.

Partners:

Albanian Ministry of Education National Agency for Vocational Education and Training 41 vocational schools

Project: Prospects for returnees

Financed by FMI as of May 2012, the International Organisation for Migration (IOM) assists people living in Austria who wish to return to their home country, Afghanistan. They are given detailed advice before departure, informed about the schedule of the planned measures and given help after arrival in Afghanistan by IOM personnel to start a new livelihood. Depending on their individual abilities, they are supported with training or in starting up a small enterprise. They are also given help to find work. People with particular needs are given special assistance, material and equipment or reimbursement of costs for medical treatment, for example.

Results

Partner: International Organisation for Migration (IOM) 52 participants have returned to Afghanistan, have already successfully established themselves and are able to support themselves and their families.

Federal Ministry of Defence and Sports

In recent years, security sector reform has come to be seen as a key task in peacebuilding and statebuilding. One aspect of this very complex and politically sensitive area is the reform of the armed forces. Together with different partners, the Federal Ministry of National Defence and Sport and the Austrian Armed Forces provide military advice and support. A central concern in 2012 has been basic training activities in the security sector. In collaboration with the European Security and Defence College and the Austrian Study Centre for Peace and Conflict Resolution, FMDS has already been conducting two highquality training courses for this since 2009. A joint training project with the Organisation for Security and Cooperation in Europe (OSCE) has also been started in Armenia. This is also concerned with basic training in security sector reform and the whole-of-government approach.

Another priority is the multi-sectoral issue of the safe storage of small arms and light weapons and conventional ammunition. The recent conflicts in Libya, Mali and Syria have again highlighted the urgent relevance and destabilising effect of unbridled weapons proliferation. In cooperation with different partners in the priority security-policy regions of South-Eastern Europe, Central Asia and Africa, FMDS therefore supports specific capacity development in this sector.

Project: International training courses

The improper storage of large arms and ammunition inventories in contravention of international standards is a particularly complex problem. It can pose a serious hazard to the immediate environment, as accidents in ammunition depots in the Congo Republic, Albania or Ukraine have dramatically shown. There is also a risk of the unchecked proliferation of weapons and ammunition.

The Austrian Armed Forces conduct multilateral training courses in safe storage, for example, in Bosnia and Herzegovina, where they carry out theoretical and practical training as part of the engagement of the European Union (EUFOR ALTHEA for munitions specialists through training-of-trainers and/or moderating, mentoring and monitoring (3M approach)). In the 3M approach, the various training modules are first presented to the local partners (moderating) and these are then carried out together with local trainers (mentoring). The training carried out by local staff is supported with technical advice and constructive criticism (monitoring). The aim is to handover the training to the national system in the partner country. Support is also given in applying training contents.

Results

- In Bosnia and Herzegovina, parts of the training are already under national responsibility.
- In the course of implementing training contents, assistance was also provided in setting up a reference ammunition depot. This demonstrates how weapons and ammunition must be stored in keeping with international standards.

Federal State of Lower Austria

Incentives for fair trade

The promotion of fair trade with developing countries has been part of Lower Austrian development policy since 2002. Lower Austria supports above all activities that also encourage municipalities and enterprises to take account of the impacts of the production of consumer goods on society and the environment. Together with its partner organisations, the federal state government has put together a package of awareness measures for this, with each of the participant non-governmental organisations contributing its own contents and approaches.

Project: Municipalities for fair trade

Any municipality seeking to engage in development policy can become a fairtrade municipality. These use products from fair trade in their institutions, provide fairly traded products in businesses and restaurants and make the population aware of the issue through events and media coverage. Together with 1,200 cities in 24 countries of the world, the fairtrade municipalities in Lower Austria contribute directly to reducing global poverty. The accompanying educational and informational work in schools and municipalities and cooperation projects with commercial enterprises communicate this theme in all walks of life.

Results

- Altogether, there are 49 fairtrade municipalities in Lower Austria, 12 of which were certified in 2012.
- In the Bucklige Welt region even more than half of all municipalities meet the five criteria for fairtrade communities.

Partners: Switzerland and Sweden

Partners: FAIRTRADE Austria Südwind NÖ Süd Südwind NÖ West

Soziales Hilfswerk für Tanzania

Federal State of Vorarlberg

Climate change has already had marked impacts in many regions of the world: lack of rainfall, diminishing groundwater reserves, growing water shortage and more people deprived of this vital resource. This is why water supply has come to be a central issue in Vorarlberg development cooperation, as an example from Tanzania shows.

Project: Water for Ligunga in Tanzania

The supply problem in the village of Ligunga in southern Tanzania was solved using a hydraulic ram. Two existing wells were lined and equipped with a hydraulic ram, which conduits safe drinking to the higher-lying village. Children and women now no longer need to cover long distances to the wells and can go to school or earn income. The surplus water is used for irrigating fruit and vegetable fields.

Results

Partners:

Schlins|Röns

One-World Group

- Improved health for about 4,000 people thanks to clean water in Ligunga.
- Additional income from harvest surpluses.

City of Vienna

In 2012, the City of Vienna issued a call for children's rights projects in development cooperation. One of the sponsored projects aims at promoting water supply, latrines and health as part of a larger health programme in Luang Namtha Province in Laos. It focuses on empowerment and participation.

Project: Health for village children in Laos

Committees were founded in two municipalities in Nale District that carried out health and hygiene education at schools and in households. Informational material for children was prepared for this and distributed together with sanitary articles. Specialists from the Lao Red Cross and the local water authority lined the clean wells in the villages and installed the necessary infrastructure to supply households with water. These are now responsible themselves for maintaining the facilities. The water committees in the two villages received training in hygiene. Particular attention was paid to involving women.

With the Red Cross in Laos, the City of Vienna already implemented a water construction project in 2011 and a project for improving the health of mothers and children in 2009. Measures for improving hygiene and training midwives were also carried out.

Results

Partners: Austrian Red Cross Lao Red Cross About 780 people in more than 100 households now have access to clean drinking water.

Bilateral development cooperation

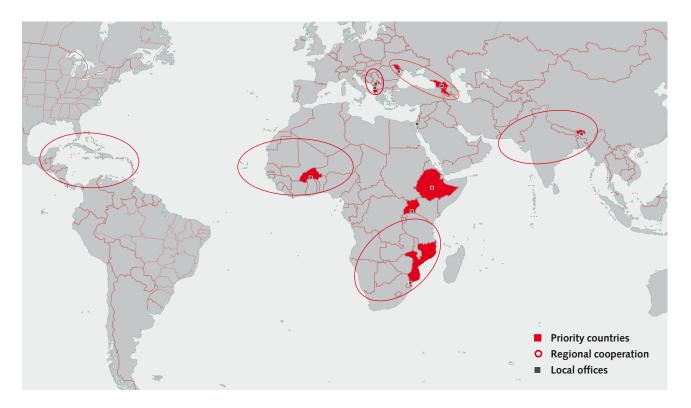

Geographical priorities

In pursuance of the new strategic alignment of geographical priorities, the Austrian Development Agency closed the field office in Managua at the end of May 2012. Local capacities ensure the smooth completion of the expiring programmes. The closure of the office in Belgrade followed at the end of June. Preparations have also been made in Serbia to assure that the ongoing measures are duly completed.

Due in particular to ongoing cooperation with the European Commission, the scheduled closure of the coordination office in Albania for the end of 2012 has been postponed until the end of 2014.

Cooperation in South Caucasus now concentrates on Armenia and Georgia. Together with the two priority countries, Austrian Development Cooperation drafted strategies in 2012 as a basis for future engagement. The thematic priorities are agriculture and forestry and good governance.

As at December 2012

Substantive priorities¹

Poverty reduction

Countries with relatively high economic growth, such as China, Brazil or India have succeeded in stemming poverty, but every seventh person worldwide still lives in extreme poverty. Worst affected are the populations in the countries of Sub-Saharan Africa.

Inequalities have widened further both in and between countries and regions. The causes and context of this social and regional disparity and the prospects for the equitable distribution of resources and income in developing countries are important issues at international level. Austrian Development Cooperation has devoted close attention to this problem and also organised a workshop on social inequality. The conclusions were that policy strategies for more equitable resource distribution – by way of taxation or employment and social policies – are already in place for the most part, but there is a need for more coherent policymaking and balancing the frequently divergent interests of politics and business and industry to implement them to broader effect.

Project: Sustainable resource use in Ethiopia

Due to population growth, leached soils and overgrazed land, foodshortages are a recurrent problem in the North Gondar Zone of the Ethiopian Amhara National Regional State. To improve the conditions of life for the population, natural resources must be conserved and ecosystems put to more sustainable use. Farmers learn methods of sustainable organic farming and grow more robust types of grain and a greater variety of fruit and vegetables. By improving livestock farming, they produce more milk and meat. The higher crop yields enable them to build reserves or sell the products on the market. Thanks to improved storage and additional income, it is easier to cope with periods of drought or crop failures. With the help of integrated watershed management, degraded soils are rehabilitated and ecosystems improved through afforestation, for example. Measures to secure property and use rights for men and women contribute to sustainable soil use and management and to alleviating conflicts of interest, between crop and livestock farmers, for instance. Land and use rights must, however, be clarified for this. The capacities of local administrations and authorities as well as the population are strengthened, for example, through the joint planning or sustainable management of watersheds, etc.

Results

- Programme outreach comprises about 840,000 households (26 per cent of whom women).
- The annual income of these households has increased on average by 138.9 per cent.
- Additional income has been invested in particular in school education.
- Sustainable agricultural methods are applied on about 325,000 hectares of land.
- The introduction of improved seeds and varieties has improved productivity on average by 60 to 70 per cent.
- The ratio of households at risk of food insecurity has declined in recent years from 48.5 to 41.5 per cent.

Partner: Bureau of Finance and Economic Development of the Amhara National Regional State

Water supply and sanitation

For some years now, the Austrian Development Agency has been conducting projects for the European Commission in delegated cooperation (ICM). In Albania, for instance, management in municipal enterprises and central water authorities has been improved with altogether EUR 4.6 million (of which 2.6 million from Austria). In the Moldovan district of Nisporeni, about 23,000 people have access to clean drinking water thanks to a general overhaul of the water supply infrastructure, which is assisted with altogether EUR 11.3 million. Austria contributes EUR 3.5 million of this.

In 2012, the European Commission delegated another EUR 30.5 million to ADA to improve drinking water and sanitation facilities in small rural towns and municipalities in Uganda. About 650,000 people will benefit from this. The necessary capacities, institutions and know-how are also being built up in the municipalities concerned to assure the reliable, long-term operation of infrastructure. In addition, every year Austria provides approx. EUR 4 million for the Ugandan water sector as joint sectoral finance with other donors and supports complementary measures by non-governmental organisations for sanitation and rural water supply in North Uganda.

Project: Investments needed for water supply in Africa

As of 2004, Austria makes contributions to the African Water Facility (AWF), which was instituted by the African Ministers' Council on Water. The instrument is administered by the African Development Bank. With the help of AWF, investment projects are prepared and water supply policies and knowledge management in the water sector improved.

The prime concern is promoting investment projects, because, as experts agree, the requisite annual funds to expand water infrastructure in Africa of about EUR 20 billion cannot be provided by development cooperation alone. There is a need for additional finance. The development banks provide soft loans for measures in the water sector. Eligible are well planned projects also with a realistic assurance of repayment – a great challenge for many countries. AWF helps here.

Results

- Every euro invested in a project application mobilised EUR 20 in investments.
- Altogether, AWF has so far been able to mobilise investments worth EUR 532 million for improving water supply and sanitation on the African continent.
- A total of 29 million people benefit.

Partner: African Development Bank

Rural development

Issues of food security and the human right to food still dominate international debate on rural development. The main hazards to food supply and access in developing countries are harvest losses and worsening climatic conditions. Acquisition of land by foreign investors has proliferated in recent years. Natural resources are on the decline and competition over their use is on the increase. This calls for greater coordination with other sectors, because due to their interaction and mutual dependence the agriculture, energy and water sectors cannot be viewed in isolation from each other. Far-sighted solutions are needed. Austrian Development Cooperation therefore attaches great importance to these interrelations – the so-called nexus – and adopts integrated and systemic approaches when planning and implementing its measures. This also involves realigning basic policy and strategy, strengthening capacities among the various actors and improving networking for joint learning from successes as well as setbacks.

Issues of coherence in European policy fields and the repercussions of inconsistent policies and strategies on developing countries have also been under debate in some international fora.

Project: Boucle du Mouhoun regional programme in Burkina Faso

In the Boucle du Mouhoun region in western Burkina Faso, Austrian Development Cooperation supports a regional development fund managed by a regional council. Representatives of local authorities and interest groups decide on project applications submitted by cooperatives or local associations with the support of the municipalities. They entail diverse activities: Wells, market halls and warehouses are built, microloans are granted to local producers, small entrepreneurs and cooperatives and measures are implemented for conserving natural resources, such as training in sustainable soil management. Capacities are also strengthened in local authorities and civil-society organisations, which are trained in management or land administration. Craftsmen/women are instructed in production and product marketing and farmers in agricultural methods, new seeds, marketing, etc.

The regional development fund has proved effective as an instrument for fostering ownership.

Results

- Improved strategic and technical capacities of local actors
- Various investments in basic infrastructure, such as wells, covered markets, etc, which are used by the population
- Increased agricultural output, by 7 per cent in grain alone
- Higher income due in part to improved honey production (from 65 to 240 litres per harvest), milk production (from 60 to 120 litres a day), soap production, beer brewing, etc.

Partner: Boucle du Mouhoun Municipal Council

Education and science

South-South cooperation is playing an increasingly important role in the scientific community. Austrian Development Cooperation is also conducting more measures in this sector and promotes institutional capacity development, quality improvement and sustainable quality assurance at universities in developing countries. In East Africa, for example, it has for many years supported sustainable water resource management. The measures are accompanied by relevant training programmes. A milestone was set in October 2012 with the start of the international Masters programme in limnology and water management, which was developed together with the Dutch UNESC-IHE Institute, Egerton University in Kenya and the Vienna University of Natural Resources and Life Sciences (BOKU). Scientists and university teachers from the whole of East Africa collaborate together with their colleagues from Austria and the Netherlands in implementing the programme, which leads to an academic title issued jointly by the participant scientific institutions.

Project: Building knowledge together

The project CAPAQUA² supports research and training centres in East Africa to enable local institutions to plan and implement specific sustainable water and water resource management measures and competently advise decision-makers in their countries. In addition to the joint Masters programme in Kenya, in the Netherlands and Austria, the Master course of study in aquatic ecosystems and environmental management is in preparation, which will be carried out by three Ethiopian universities. Modern equipment is provided to the partner institutions in Ethiopia for laboratory and field research. Regular further training of researchers assures the quality of the programme.

Results

- Establishment of the joint Masters programme in limnology and water management at the University of Natural Resources and Life Sciences, Vienna, Egerton University in Kenya and the UNESCO-IHE Institute in the Netherlands
- Modernisation of scientific institutions at the universities of Egerton (Kenya), Addis Ababa and Bahir Dar (both Ethiopia)
- 230 students have completed the post-graduate training programmes since 2002.
- 70 Master papers have been completed since 2002, which also influence regional and national strategies and policies predominantly in East Africa.

Partners: University of Natural Resources and Life Sciences (Austria) Egerton University (Kenya) Addis Ababa and Bahir Dar Universities (both Ethiopia) Ethiopian Institute of Agricultural Research, National Fish and Other Aquatic Lives Research Centre (EIAR/NFALRC – Ethiopia) UNESCO-IHE Institute (Netherlands)

Gender

Experts evaluating the implementation of the Gender Guideline 2004-2011 of Austrian Development Cooperation in 2012 came to the conclusion that greater account should be taken of gender equality and the empowerment of women as strategic goals in programmes and projects. To do this, gender mainstreaming must be seen as a top-down strategy and the joint responsibility of all actors in Austrian Development Cooperation. These recommendations are now being gradually implemented. In-house ADA further training events were already carried out in gender mainstreaming and the human rights-based approach in 2012. The role of men in achieving gender equality was also discussed and in Albania local gender experts were assigned to ensure that projects put gender equality goals into practice.

To implement the outcomes of Busan, which also call for increased gender data collection and for mainstreaming gender equality goals in policies and budgets, together with the OECD Development Centre Austrian Development Cooperation designed a new project on gender surveys in Southern and East Africa (with the focus on Uganda). The aim is to bring about changes in social norms that stand in the way of gender equality in the long term. In addition, Austrian Development Cooperation played a part in revising the National Action Plan for Implementing UN Security Council Resolution 1325 (2000) and in the fourth report on the action plan.

Project: On the way towards gender equality in Albania

In July 2012, the Albanian Government adopted a resolution to adopt the principle of gender budgeting, that is, to plan the allocation of public finances in line with a gender assessment. Finance is now assured for major projects/programmes, such as the implementation of the National Gender Strategy and measures for preventing domestic and sexual violence. In cooperation with UNWOMEN or HORIZONT3000, Austrian Development Cooperation has made a substantial contribution to this success.

Result

Decision of the Albanian Government to apply the principles of gender budgeting to national finances

Good governance, peacekeeping and human rights

In 2012, Austrian Development Cooperation held detailed discussions with international and national experts on the issues of economic, social and cultural rights, the right to water, gender mainstreaming, the human rights-based approach and asserting the rights of persons with disabilities. The outcomes of this intensive discussion culminated in specific conclusions and recommendations for future programmatic work. For example, good practices were compiled, an inclusive project format drafted and further training courses on the diverse topics provided.

Partners:

UNWOMEN (Promoting Gender Responsive Policies in South East Europe) HORIZONT3000 (Gender Equity Programme, Albania) The working group on persons with disabilities met several times in 2012 to prepare a practical manual for the inclusion of this target group in project cycle management. Contributions were also prepared on progress in implementing the National Action Plan on Disability 2012-2020 and the UN Convention on the Rights of the Child in Austria. Experts of Austrian Development Cooperation also played a part in the third National Action Plan against Human Trafficking 2012-2014.

No fragile state is expected to achieve the Millennium Development Goals by 2015. This is reason enough for a group of donors, international organisations and the partner countries concerned to reassess their engagement in fragile states and redefine future requirements in a joint policy paper. This New Deal for Engagement in Fragile States, which was very well received at the High Level Forum in Busan in 2011, was discussed in detail in OECD and EU bodies. The concern was to find ways of implementation that account for the five peace-building and statebuilding goals (PSGs) (legitimate politics, security, justice, economic foundations, revenues & services) that are defined in the new frame of reference.

A workshop enhanced knowledge on adopting a conflict-sensitive approach in the programme and project activities of Austrian Development Cooperation. Methodological inputs and considerations about their practical implementation were discussed.

Finally, in 2012 Austrian Development Cooperation mainly supported civic and regional organisations, such as the African Union and ECOWAS with capacity development in peace and security or by promoting action plans for empowering women in peace processes.

Project: Social participation and human rights in Macedonia

In Macedonia, Austrian Development Cooperation promoted mainstreaming the human rights-based approach in national and local planning processes for poverty reduction, social inclusion and the assimilation of socially underprivileged groups in society. The human rights-based approach guarantees that target groups are also given a genuine say with all their problems and needs. The Macedonian Anti-Poverty Platform now represents their concerns and rights in dealings with the government. The concern here is to group together civil-society organisations from the social sector. In addition, the project also succeeded in introducing the human rights-based approach at community level in the local planning and implementation of development measures. The local NGOs are supported in performing their monitoring and advocacy obligations.

Results

- Foundation of the Anti-Poverty Platform with about 70 member organisations from the social and poverty reduction sectors
- Membership of the platform in the European Anti-Poverty Network
- Capacities have been strengthened for human rights-based local development planning by municipal personnel, representatives of local NGOs and representatives of the private sector in eight Macedonian partner municipalities.
- Seven micro projects have been implemented to support persons with disabilities, to care for older people and for the economic empowerment of women in rural areas.
- Here, for example, income-generating measures in skilled crafts were financed for female members of the Albanian minority and day centres supported for persons with disabilities.

Partner: Ludwig Boltzmann Institute of Human Rights

Environment

The United Nations Conference on Sustainable Development in Rio de Janeiro (Rio+20) in 2012 marked the key event for development cooperation. Prior to the conference, specific positions were also developed on the individual agenda items in bodies such as the Austrian Council for Sustainable Development, in which Austrian Development Cooperation is also represented. In addition, Austria drafted positions on the EU proposals and OECD Policy Statement for Rio+20. Besides the official negotiations at the summit itself, Austria was also involved in some side events. In a joint pavilion with Switzerland, Peru and the United Nations Environment Programme (UNEP), for example, it offered a platform for a discussion on the importance of mountain regions for sustainable global development and presented specific project case studies on this.

Project: Sharing resources

Where several countries have to share natural resources, this can easily give rise to potential conflict. On the other hand, joint management can bring neighbours that would not otherwise have much to say to each other to the negotiating table and this can foster peace in a region. The Environment and Security Initiative (ENVSEC) is based on this central idea and has set itself the goal of preventing possible conflicts in the environment sector and promoting cooperation in Eastern Europe and Central Asia by securing dams, mines and waste disposal sites, drawing up integrated management plans for cross-border national parks and water systems or setting up information centres, for example.

Austrian Development Cooperation already supports ENVSEC as of 2005. In 2012, a new funding contract was signed for projects in South Eastern Europe/the Danube Region and Moldova.

Results

Partners:

and REC

- Since the beginning of the initiative in 2004: 140 projects in disaster risk management (e.g. securing the former Zuta Prla-Mine in Montenegro to prevent leakage of acidic water), natural resource management (e.g. development of a regional plan of action against illegal logging, training for national authorities in criminal environmental law), civic participation (e.g. setting up a centre for environmental information in Bosnia-Herzegovina) and climate change (protection and adaptation)
- 150 million people benefited from the measures.

UNDP, UNEP, UNECE, OSCE

Financial support: Finland,

Sweden, EU, Austria

Private sector and development

The Business Partnership Programme promotes cooperation between Austrian enterprises with the private sector in developing and emerging countries. In 2012, eleven new business partnerships were approved with funding amounting to almost EUR 2 million. Management for results has also been improved by defining specific indicators in keeping with international standards and criteria. Accordingly, the new approved projects will directly benefit 1,200 enterprises and/or institutions and 93,000 people and create 200 additional jobs. 21 projects have been completed, so that altogether 39 projects were underway at the end 2012.

The Business Partnership Office in ADA does not just provide enterprises with funding, it also advises them in planning and submitting projects. To expand the programme, cooperation has begun with the Oesterreichische Entwicklungsbank (OeEB), which provided EUR 3 million for 2012.

Project: New teaching jobs in Mexico

Emerging countries frequently lack capable skilled labour for production. To ensure the supply of sufficiently trained junior personnel, the Austrian plastic bottle manufacturer, ALPLA, the national Mexican education institution, CONALEP, and the Mexican specialist dual training institution, ALTRATEC, started apprenticeships for toolmakers and plastic moulders in Mexico. The main target group are pupils from low-income classes. The project has a pilot function and will help other companies train apprentices in the dual system through know-how transfer.

Results

- 126 apprentices are trained a year.
- 32 additional jobs are created.

Humanitarian aid

A priority of humanitarian aid has been the conflict in Syria, which has given rise to a dramatic humanitarian crisis in the country itself and in neighbouring states. EUR 3.6 million was made available from the Foreign Disaster Fund and by ADA for emergency relief of internally displaced persons in Syria and refugees, above all in Jordan and Lebanon. Another major humanitarian concern was the drought disaster in Sahel, which exacerbated the crisis in Mali. Financed by the Foreign Disaster Fund, ADA and the food aid facility of the Life Ministry, EUR 3.1 million was provided for the alleviation of the food crisis and for refugees and internally displaced persons. Additional aid amounting to EUR 1.85 million was provided for humanitarian crises in Haiti, Uganda and South Sudan. The funds were allocated both via international humanitarian and Austrian non-governmental organisations.

Partners: ALPLA Werke Alwin Lehner CONALEP (national Mexican education institution) ALTRATEC (specialist dual training institution in Mexico)

Project: Hope for Malian refugees in Burkina Faso

The ongoing drought and bad harvest in 2012 in Burkina Faso led to a persistent food crisis. The precarious situation was exacerbated by the civil war in Mali, which prompted countless refugees to flee to the neighbouring country. With support from Austrian Development Cooperation in Soum Province in the North, the NGO, HOPE'87, improved the conditions of life for about 18,000 people. 466 refugee families were supplied with tents and rice, edible oil, salt, sugar and soap. Parallel to this, 1,900 local families were helped to safeguard their livelihoods and prepare themselves better for future crises. This included vaccinating about 39,000 animals. Many women can now make a more stable basic living for themselves and their families with small animal breeding. The food situation for refugees has also improved.

Results

About 2,750 Malian refugees were given relief.

Partner: HOPE'87

Almost 18,000 people could be saved from further malnutrition and have been better prepared for future crises.

Promoting Civil Society NGO cooperation international

In 2012, Austrian Development Cooperation provided about EUR 13 million for cofinancing projects/programmes of Austrian non-governmental organisations in developing countries. Measures were supported in food security, rural development, health and sanitation and for primarily training women and youth and integrating persons with disabilities. Precedence was given to upgrading programme methods and know-how transfer to raise aid effectiveness.

Projects of the platform of non- Austrian governmental organisations, Global Responsibility, and international programmes for knowledge transfer among civic initiatives were promoted. These were mainly devoted to exchange of experience, advocacy and a critical assessment of methods and instruments to improve the effectiveness of their work. A measure of the success of the concerted actions is the endorsement of the developmental engagement of civil-society initiatives in international committees and fora. For example, partner dialogue with representatives of civil-society initiatives from developing countries and the EU was institutionalised at EU level. In the booklet, Partnering with Civil Society, 12 Lessons from DAC Peer Reviews, of October 2012, OECD also stresses the importance of civil-society organisations as independent and essential development cooperation partners, as was additionally affirmed at the 4th High Level Forum in Busan.

Project: Inclusive Burkina Faso

With support from Austrian Development Cooperation, Light for the World conducts a programme for promoting an inclusive society in Burkina Faso. The foremost aim is to enable persons with disabilities to take equal and self-determined part in development processes. Persons with disabilities should therefore be taken into account in national and international health, education and social programmes. Key measures include cooperation with government institutions by forging partnerships with ministries, addressing the issue of disability in national and local action plans and collaboration with other national and international NGOs.

The systematisation and documentation of experience lays the foundation for successful initiatives to be implemented in other developing countries. Another major component is the promotion of networks in the emerging movement of persons with disabilities and raising their ability to engage in advocacy and public relations.

Results

- Altogether, access to services in ophthalmology, rehabilitation and education in 2012 alone has improved the quality of life of almost 126,000 people.
- More than 68,000 people were given ophthalmic treatment.
- More than 2,000 children and youth with disabilities were able to take part in educational courses.

Development communication and education

In Development communication and education, Austrian Development Cooperation again supported a broad range of measures in 2012 as well. This included projects in information and educational work, global learning, advocacy, cultural communication and dialogue and campaigns. 47 individual projects were promoted with a total of about EUR 2.1 million. An additional EUR 1.9 million was committed in ongoing project agreements.

Global learning

In November 2012, representatives of foreign, development and education ministries of all EU member states continued discussion at the International Symposium on Global Learning in The Hague about teaching and learning in the international setting. Central topics were quality assurance and development, strategic approaches, strengthening coherence and ways of supporting global learning in Europe. The conference was sponsored by the EU for the first time.

Project: Rio+20 Initiative

In response to the UN Conference on Sustainable Development in Rio, in 2012 Austrian Development Cooperation mainly promoted projects of development and environmental non-governmental organisations in environment, climate, resources, renewable energies, food, human rights, world economy and lifestyle. In knowledge exchange as well, ADA helped the actors to coordinate measures and ensure joint visibility. About 60 events and campaigns were conducted with a successful public relations impact.

Results

- Participation of over 30 environmental and development organisations in Austria
- 60 events in the whole of Austria (press conferences, discussions, public campaigns, exhibitions, film days, conferences, Youth Forum Rio+20)

Information and communication

Keeping in touch

The Infobox of Austrian Development Cooperation continued its tour that started in 2011. From January to October 2012, it stopped off at twelve public institutions in Vienna, Lower Austria, Salzburg, Tyrol, Upper Austria and Styria. The exhibition provides entertaining and interactive information on Austrian engagement in Africa, Asia, Latin America and Eastern and South-Eastern Europe. The web platform, www.entwicklung.at, reported in detail about all venues and dates.

Investments are worthwhile

The informational services continued to focus on the Business Partnership Programme. With the message – You invest in future markets? We fund entrepreneurial spirit and ideas – via business media and events Austrian Development Cooperation targeted Austrian small and medium-sized enterprises interested in emerging markets. Citing best practices, it demonstrated that business investment with added developmental value is worthwhile for everyone: New jobs improve standards of living for people in partner countries and Austrian enterprises earn more profit.

As a new partner in the economic development programme, the role of the Oesterreichische Entwicklungsbank was also communicated in publications and media work. The website was updated and supplemented with new factsheets and project examples.

Project: Service for the public

The ADA Information and Communication Office liaises between members of the public interested in development policy and Austrian Development Cooperation. Its various tasks include editing the publication, Weltnachrichten (World news) and the electronic newsletter, oeza aktuell (ADC today), and also answering enquiries, updating the website and database and organising events, for example.

Results

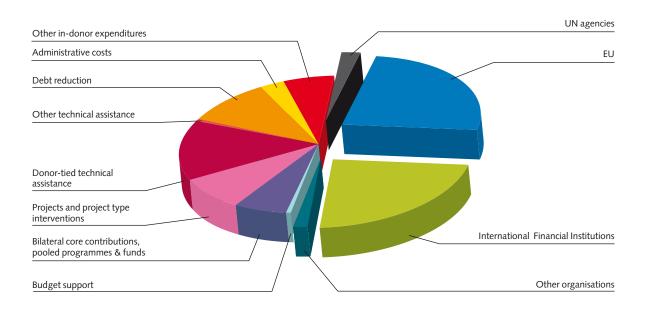

- The electronic newsletter, oeza aktuell (ADC today), informed 3,500 people a month about relevant developmental topics and events.
- Every quarter, Weltnachrichten (World news) informed about 6,500 readers about development-policy topics.
- Approx. 16,000 visitors a month receive information on Austrian Development Cooperation via the website.
- About 450 enquiries from the public were answered.
- 1,300 publications were distributed on request and/or at events.

| in % of total ODA | 28% | 56% | 49% | 56% | 52% |
| ODA, total | 1,187.97 | 819.91 | 912.35 | 799.30 | 860.77 |

In accordance with OECD/DAC classifications, the categories were as follows:

International Financial Institutions: World Bank group Regional banks Other financial institutions Other organisations:

IBRD, IDA, IFC, MIGA (& associated trust tunds) AsDB, IDB, AfrDB and others (& associated trust tunds) IMF-ESAF/PRGF (until 2005), GEF (from 2009 100% ODA), CGIAR (until 2008), CFC Montreal Protocol, CITES, EPPO, IOM, IUCN (until 2006), IPGRI, IPCC, DDAGTF, OECD Development Centre

Up until 2008, payments to CGIAR (Consultative Group on International Agricultural Research) were reported as multilateral aid. Since 2009 these payments have been reported as bilateral as these are funds earmarked for particular purposes by Austria.

II.2 Multilateral ODA of FMEIA 2012

| | Net disbursem | ients in € mil |
|--------------------------|--|----------------|
| Organisation | Description | 2012 |
| United Nations Organi | sations | |
| CERF | Core contribution to the Central Emergency Response Fund (CERF) | 0.20 |
| OHCHR/UNVFTC | Core contribution to the Voluntary Fund for Technical Co-operation | |
| | in the Field of Human Rights (UNVFTC) | 0.09 |
| UNCDF | Core contribution to the United Nations Capital Development Fund (UNCDF) | 1.00 |

III.1.5 Implementation structure of bilateral ADC funds of ADA 2010–2012

* As understood by OECD/DAC, public-private partnerships mean international organisations whose desicion-making bodies include representatives of both government and civil society.

III.1.6 Cross-cutting issues in development policy (policy objective markers) in ADC/ADA contributions

The so-called policy objective markers (markers for cross-cutting issues in development policy) were introduced in OECD/DAC as instruments for monitoring the implementation of general international development goals (e.g. gender equality or environmental protection) in development programmes and projects by OECD/DAC donors. The markers measure in what part of their portfolios development donors have already taken specific account of these development-policy objectives and document the programmes and projects where these are included as specific, i.e. principal objectives (2) and/or as integrated, i.e. significant, secondary objectives (1). As development projects/programmes can pursue more than one specific objective, they can be allotted more than one marker. In this approach, marker data do not make quantitative statements on how much funding has been allocated for specific objectives but the extent to which these objectives have been included in the new contracts of a reporting year. The relevant quantities are therefore not the payments, but the contractual volume of binding new commitments, possibly in combination with the number of contracts. Of note here also is that instead of gradings in the sense of an assessment, the (2) and (1) markers are indicators for different methodologies.

Under the auspices of OECD/DAC, the following developmental issues are included by means of markers: gender equality, aid to environment, participatory development and good governance, trade development, the UN Framework Convention on Climate Change (mitigation and adaptation), the UN Convention on Biological Diversity and the UN Convention to Combat Desertification.

As the marker data is subjected to systematic quality assurance in this core sector of Austrian ODA, the following tables present a breakdown of the operational ADC budget of ADA.
