¹ In response to ODA modernisation by OECD/DAC, the report for 2019 was submitted to OECD/DAC both on the basis of net disbursements and grant equivalents. The grant equivalent metric makes it easier to compare grants and loans. For a loan, it denotes a present value estimate of the grant element accumulated over the whole term of the loan at the time of its disbursement. To improve comparability, here and in the following the figures pertain to net disbursements. The ODA value based on grant equivalents amounts in the 2019 reporting year to EUR 1,098.66 million. The difference of EUR 2.51 million is due to loan repayments.

III.1.6 Cross-cutting issues in development policy (policy objective markers) in ADC/ADA contributions 2017-2019

The so-called policy objective markers (markers for cross-cutting issues in development policy) were introduced in OECD/DAC as instruments for monitoring the implementation of general international development goals (e.g. gender equality or environmental protection) in development programmes and projects by OECD/DAC donors. The markers measure in what part of their portfolios development donors have already taken specific account of these development-policy objectives and document the programmes and projects where these are included as specific, i.e. principal objectives (2) and/or as integrated, i.e. significant, secondary objectives (1).

As development projects/programmes can pursue more than one specific objective, they can be allotted more than one marker. In this approach, marker data do not make quantitative statements on how much funding has been allocated for specific objectives but the extent to which these objectives have been included in the new contracts of a reporting year. The relevant quantities are therefore not the payments, but the contractual volume of binding new commitments, possibly in combination with the number of contracts. Of note here also is that instead of gradings in the sense of an assessment, the (2) and (1) markers are indicators for different methodologies.

Under the auspices of OECD/DAC, the following developmental issues are included by means of markers: gender equality, reproductive, maternal, newborn and child health, aid to environment, participatory development and good governance, trade development, the UN Framework Convention on Climate Change (mitigation and adaptation), the UN Convention on Biological Diversity and the UN Convention to Combat Desertification, Disaster Risk Reduction and Inclusion and Empowerment of Persons with Disabilities.

As the marker data is subjected to systematic quality assurance in this core sector of Austrian ODA, the following tables present a breakdown of the operational ADC budget of ADA.

ADA commitments for programmes and projects in 2019 totalled EUR 115.39 million.

According to OECD/DAC criteria, commitments for administrative costs, projects within Austria and general budget support are excluded from the marker system.

As of 2015, the calculation basis for marker data was reduced by these contractual amounts. As of 2019, the basis amounts to EUR 106.96 million.
